

+Toyz v0.37

Move cursor to any [macro name](#) and double-click it

Analysis

[Extended analysis in Wordfast](#)

Counts TM matches and internal analogies within a document using Wordfast. To view internal analogies only, run this macro on an empty TM

[Extended analysis in Trados](#)

Counts TM matches and internal analogies within a document using Trados. Create a new TM or backup existing TM - it will be changed during analysis

File Maintenance

[BuildMasterDoc](#)

Creates a master document containing all the files in directory specified. Name of resulting document is __Master.doc. Useful when performing search-replace or spellcheck over several dozens of documents

[SourceTextOnly](#)

Restores source text from segmented documents

[Segmentation validity check](#)

Checks Trados-like segmented file for segmentation errors.

Format conversions

Double-click the desired conversion, then open a document to convert. Before conversion, a backup copy with the same name and .BAK extension will be created.

[Trados-like segmented text to Word table](#)

[Word table to Trados-like segmented text](#)

[Excel workbook to Trados-like segmented text](#)

[Wordfast TM to Trados-like segmented text](#)

[Trados TXT export to Word table](#)

[STAR Transit project to Trados-like segmented text](#) and [back](#)

[TTX \(TagEditor\) file to Trados-like segmented text](#) and [back](#)
